

	OMEGA	Version : 6.3 Change date : 20.10.2025
	Media Production Standards	

1. Introduction

OMEGA Requires many assets creation (images, videos, documents) and each one of them are created by multiple teams / agencies. In constant evolution of digital and systems, OMEGA needs to define standards of assets creation to

1. **Simplify the exchange between departments:** every department should be able to understand the asset type just reading the file name.
2. **Automatize systems integration:** File naming and contents standardization allows IT systems to also understand the type of assets and automate their integration without the needs of any human action that could lead to mistakes.

This document describes the file standards for product related assets. The other assets standard definition will be defined in a different document.

2. Scope

The scope of this document is to define the following standards:

- File naming for product assets: What needs to be added in the file name.
- File content for product assets: Mainly EXIF information allowing internal tools to directly qualify the main asset characteristics.

3. Department management

After many discussions with the different departments, we discovered that the requirements are different between the type of assets. For example, the marketing requires campaigns data provided in the images/videos and the PM just needs to know the product PIC reference and the type of asset (front, back, ...).

Therefore, we decided to have 4 different specifications. All of them will share the same starting part of the asset including the object reference (project, product, ...) and an additional part that qualifies better the asset for each department. This second part will not be used by Contentserv for integration.

1. Product Management – Product Images and documents
 - a. Define all product related assets produced by the Product Management department.
 - b. Those pictures are usually presenting the watch in different positions always on a neutral background.
2. Product Management – Design
 - a. Those pictures are not related to products directly but relates a design preview of a full project.
 - b. The pictures are not the final version of the product but gives a “preview” on what will be built.
3. Marketing – Creative
 - a. Define all product related assets used for advertising purposes.
 - b. Those assets are mainly videos and pictures presenting the product in a lifestyle environment (e.g. someone wearing the watch).
4. Marketing – E-commerce
 - a. E-commerce is going to use standard assets provided by PM/Marketing. In case any specific assets are going to be generated for the website, they will need to fit one of the previous sections depending on the asset type.

	OMEGA	Version : 6.3 Change date : 20.10.2025
	Media Production Standards	

4. File naming

4.1. Accepted formats

4.1.1. Product Management – Product Images

Product images provided by the product management team are Packshots. Those pictures are presenting the product on a white background.

The first part of the file name will define the product and the second part is the file type:

{PIC}_{Collection}_Packshot_{Type}_{Colorimetry}.tif

Example:

215.92.46.51.01.003_SE_Packshot_Front_RGB.tif

Here before, the image will be a RGB **Front** packshot (product on white background) image of the reference **215.92.46.51.01.003** (collection SE => Seamaster).
For some components (e.g. movements, watch boxes), the collection is not required.

Every image should be in full bleed and in the higher resolution / quality possible.

Layers are accepted but by default the background layer needs to be disabled for assets having only a white background.

We need to stick to one single language (English) and only one way of naming as follow:

Attribute	Type	Example(s) file name	Sample
Watch			
Watch - Front	Front	215.92.46.51.01.003_SE_Packshot_Front_RGB.tif

	Media Production Standards	

4.1.2. Product Management – Documents

Documents are, in the same way, linked to products based

The first part of the file name will define the product and the second part is the file type:

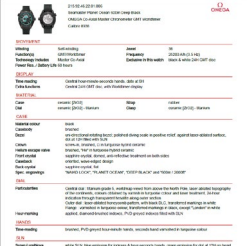

{PIC}_**{Collection}_Document_{Type}_{Lang}.pdf

Example:

3343910_SP_Document_ProductDescription_EN.pdf

Here before, the first image will be a Main Front design image of the project P_100734.

If the Main has not been defined (not added to the file name), the picture will be added to the alternative images.

Attribute	Type	Example(s) file name	
Project - Front	ProductDescription	215.92.46.22.01.006_SE_Document_ProductDescription_EN.pdf	

	OMEGA	Version : 6.3 Change date : 20.10.2025
	Media Production Standards	

4.1.3. Product Management – Design

Unlike product images, designs are directly linked to a project. This is mainly due to the fact they can be created even before products references are selected.
The first part of the file name will define the project number and the last part is the type:

{Project Nb}_{Collection}_Design_{Watch Head Material}_{Bracelet Material}_{Type}_{Alternative}.png

Example :

P_100734_SE_Design_MSG_RU_Front_01-Main.png
P_100734_SE_Design_YGST_YGST_Front_02.png

Here before, the first image will be a **Main Front** design image of the project **P_100734**.

If the Main has not been defined (not added to the file name), the picture will be added to the alternative images.

Attribute	Type	Example(s) file name	
Project - Front Project - Front - Alternatives	Front Front	P_100734_SE_Design_ST_RU_Front_01-Main.png P_100734_SE_Design_ST_ST_Front_01.png P_100734_SE_Design_ST_ST_Front_02.png	 P_100769_SE_Design_ST_RU_Front_Main.png P_100769_SE_Design_ST_ST_Front.png
Project - Caseback Project - Caseback - Alternatives	Back Back	P_100734_SE_Design_ST_RU_Back_01-Main.png P_100734_SE_Design_ST_ST_Back_01.png P_100734_SE_Design_ST_ST_Back_02.png	 P_100769_SE_Design_ST_ST_Back_Main.png

	Media Production Standards	

4.1.4. Store Design

As POS items are still products in the system, the standard for those items will be almost the same as for section 4.1.1:
The first part of the file name will define the product and the second part is the file type:

Example:

{PIC}_PO_Packshot_{Main}_{Colorimetry}.tif

334307022_PO_Packshot_Main_RGB.tif
3343910_PO_Document_Doc.pdf

Here before in the first example, the image will be a RGB **Main** packshot (product on white background) image of the reference **334307022**.

Collection defined for POS items is PO.

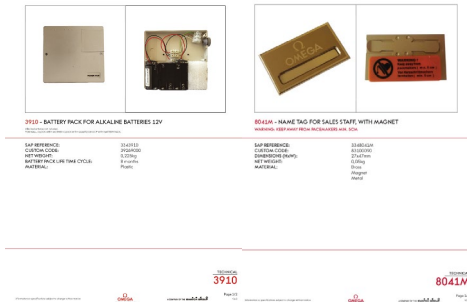

In the second example, the file will be a document for reference **3343910**. Adding à numbering (such as Doc-1) will also work in case multiple documents are available for the same object.

Every image should be in full bleed and in the higher resolution / quality possible.

Layers are accepted but by default the background layer needs to be disabled for assets having only a white background.

	OMEGA	Version : 6.3 Change date : 20.10.2025
	Media Production Standards	

We need to stick to one single language (English) and only one way of naming as follow:

Attribute	Type	Example(s) file name	
Main Image	Main	334307022_PO_Packshot_Main_RGB.tif	
Additional Images	Add-{pos}	3343910_PO_Packshot_Add-1_RGB.tif	
POS - Documents	Doc	3343910_PO_Document_Doc.pdf 3343910_PO_Document_Doc-1.pdf	

	OMEGA	Version : 6.3 Change date : 20.10.2025
	Media Production Standards	

4.1.5. Marketing – Creative

{PIC}_{Collection}_Adv_{Type}_{Colorimetry}_{Campaign}_{Typology}_{Product info}_{Format}.tif

Example:

131.25.29.20.55.001_CO_Adv_Amb_RGB_FS_WT_CO-Woman_Full.tif

Here before, the image will be a RGB **Ambiance** advertising asset of the reference **131.25.29.20.55.001** (collection CO => Constellation).

Attribute	Type	Example(s) file name	
Watch - Ambiance	amb	131.25.29.20.55.001_CO_Adv_amb_RGB_FS_WT_CO-Woman_Full.tif	
Watch – Ambiance Close-Up	amb-close-up	131.25.29.20.55.001_CO_Adv_amb-close-up_RGB_FS_WT_CO-Woman_Full.tif	
Watch – SingleVisual	single-visual	131.25.29.20.55.001_CO_Adv_single-visual_RGB_FS_WT_CO-Woman_Full.tif	
Watch – Duo	duo	131.25.29.20.55.001_CO_Adv_duo_RGB_FS_WT_CO-Woman_Full.tif	
Other ???			

Naming Campaigns:

SP: Speedmaster
SE: Seamaster
FS: Festive Season
Mother's day: MD
Father's Day: FD
...

Typology:

TBD

5. EXIF

EXIF information are useful to understand the main assets that cannot be directly added to the file name. Information stored into this field are more complete than just a file name and can evolve in the future in case other information are required.

5.1. EXIF for Product Management production

EXIF data on PM assets (watch on white background) needs to be the following:

Type of assets	Parameter	Format	Example
Image	Photographer	Text	Name of the photography agency

5.2. EXIF for Marketing production

EXIF data on Marketing assets (Images / Videos / Documents) needs to be the following:

Type of assets	Parameter	Format	Example
Image	Photographer	Text	Name of the photography agency
Video	Videographer	Text	Name of the video agency
